Title: Get data into Exell Spreadsheet

Description: Get data into Exell Spreadsheet

Solution: You can access data in our database from Excel using the Microsoft Query tool provided with Excel. The tool is NOT installed by default.

It should be possible to access the data without the query tool but that didn't work for us when accessing Sybase data (only worked on Microsoft database).

In the Query tool, select the data source that is being used by our software such as "PP ASA6 Client"

Attached is an excerpt from the help file on using external data (our install CD sets up the ODBC drive and the data sources required).
